

Customized Solutions Case Study

Wireless Cellular Product

Customer

A major provider of security alarm systems wanted a wireless device that would enable its security alarm systems to transmit alarm signals over a wireless communication path.

Customized Solution provided by CRN Wireless

After meeting with the customer and analyzing the customer's different security alarm products CRN Wireless designed and manufactured a wireless device that was compatible with the customer's product lines. In view of the fact that the customer's systems were sold across the United States, CRN Wireless designed the wireless device to utilize the nationwide cellular networks in order to maximize the revenue opportunity for the customer. CRN Wireless handled all of the design, engineering, software development and production for the customer. As the sales of the new device grew, production was seamlessly transferred to the customer's own manufacturing facility.
