

NearNet **NNT-RF7**

UHF Radio Alarm Communication Device

NearNet **NNT-RF7** provides a wireless communication path for alarm signals from an alarm panel to any central station using triggered inputs.

Product Highlights

- Uses proprietary CRN UHF network → **No Sunsets**.
 - FCC-licensed frequencies across 11 NYC tri-state area radio towers.
- Reports to any central station. No additional equipment required.
- Discrete inputs triggered in as little as 750 milliseconds.
- SmartChannel™ detects burg and fire from the bell output.
- **NNT-RF7** – Simple three wire installation + five auxiliary inputs
- Daily or weekly supervisory test options.
- Powered off the panel. No additional power supply / battery required.
- Designed, manufactured and supported in the USA.

Product Benefits

- **No Sunsets.** NearNet devices are not subject to frequency sunset.
- **Save Time:** Fast, simple installation with only three wires to connect. All units are factory programmed.
- **Save Money:** Straightforward billing with no activation fees, complicated programs or unrealistic minimums. Low upfront equipment pricing reduces your initial cash outlay.
- **Increase RMR:** Wireless reporting increases RMR while saving your customer money by eliminating land lines. CRN devices offer a simple, cost-effective means to grow your sales and increase your profit.

Technical Specifications

- Radio Transmitter: UHF 460 MHz.
- Power Source: 12VDC from the alarm panel.
- Standby power consumption: < 20 Ma.
- Transmit power consumption: < 2 A for less than one second.
- Dimensions: 7.75" H x 3.25" W x 1.5" D (dimensions exclude antenna).
