Bob's Generator - 5555555555

Service Log Detail From 05-07-2017 To 05-13-2017

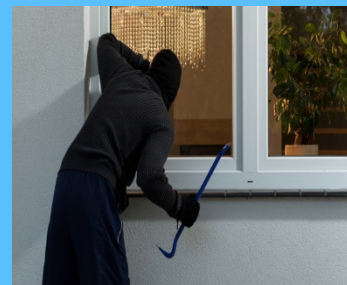

Subscriber Name	ID #		Event Type	Date Time
Smith Generator	123456		Failure to Exercise Reported	2017-05-07 23:47:00
Jones Generator	123457		Maintenance Required Reported	2017-05-11 18:13:45
Doe Generator	123455		Failure to Exercise Reported	2017-05-07 06:27:01
James Generator	123458		Maintenance Required Reported	2017-05-12 17:07:01

Generator owners appreciate the comfort of knowing that their service provider is on top of any issues that arise with their generator. **Weekly service log reports** are a great way to know which of your generators need attention.

Stay informed about potential problems before your customers are impacted. The weekly report (example shown above) can be conveniently sent to your email every Sunday morning, so that you are able to schedule needed maintenance calls throughout the following week. Setting up your generator log reports is very easy and we encourage all Generator Monitor customers to try it out. If you would like to set up your weekly service log report please call 631-696-2769 x302 or email jbottie@crnwireless.com.

News and Events Facts of Summer life:

- The most frequent months for break-ins are July and August

Alarm Communications

Now is the Time to Stop Relying on POTS Lines

AT&T wants out of maintaining landlines in Illinois and is asking the state legislator to scrap requirements that the company maintain land-based phone lines. AT&T must get permission from Illinois and a number of other state legislatures before they can formally ask the Federal Communications Commission to be allowed to scuttle the thousands of miles of land-based phone lines. The bill is currently awaiting a Senate floor vote.

“It’s taking a large investment that could be spent covering the majority of their customers for wireless or IP-based phone services,” said Brent Skorup, Technology Fellow with the Mercatus Center.

According to the National Center for Health Statistics, only four percent of Illinois residents still rely solely on landlines. But skeptics of the plan worry about access to rural areas covered by AT&T. Skorup contends the fears about people being without any service are largely unfounded. In 2015, the Ohio state legislature voted to allow all major telecom companies to withdraw from their basic landline services.

Use NearNet UHF or AlarmPath cellular devices in all of your installations now, and don’t get caught off guard with the demise of POTS landlines.

Industry Trends

CRN Wireless Announces New LTE Devices

CRN Wireless’s new LTE devices provide customers with a Long-Term Evolution (“LTE”) solution, operating on LTE wireless spectrum, which provides increased capacity and speed of wireless data through advanced digital signal processing techniques and modulations.

CRN Wireless expands its range of wireless communicators to include the most options available in the industry. Cellular options include 2G, 3G, 4G and LTE technologies across multiple carriers. “At CRN Wireless, we continuously innovate to support the needs of our customers and help them succeed,” said Tony Saunders, Senior Vice President.

LTE devices are now available for purchase through distributors or through direct purchase from CRN Wireless.

To order your LTE device:

Call 631-696-2769 x 306 or email sales@crnwireless.com
